

World Immunization Week 2022

Long Life for All

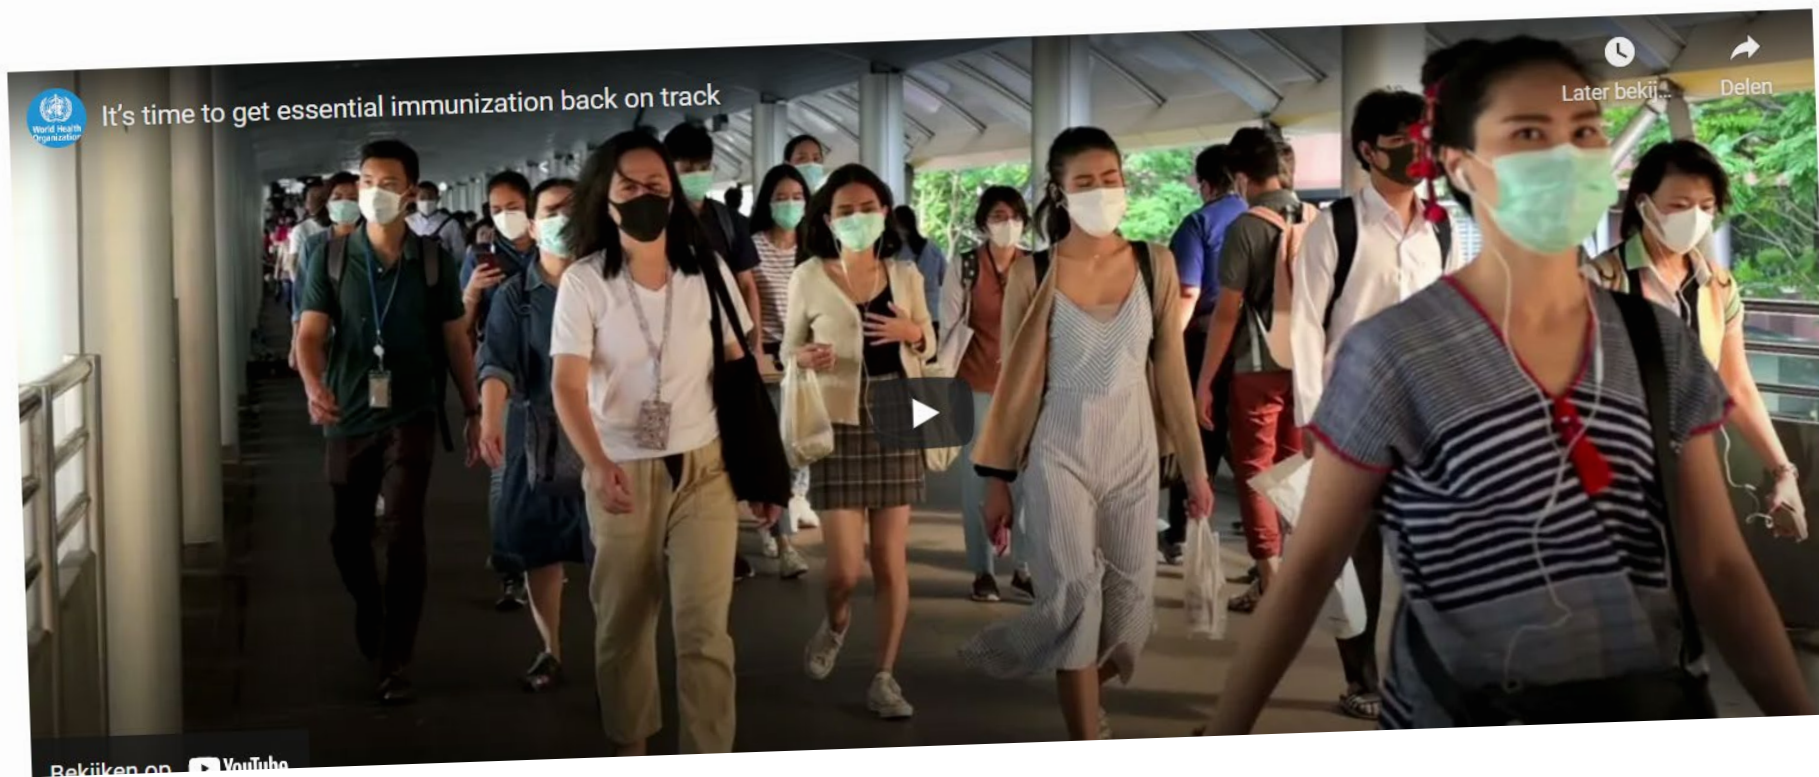

World Immunization Week 2022 - 24 to 30 April

World Immunization Week, celebrated in the last week of April, aims to highlight the collective action needed and to promote the use of vaccines to protect people of all ages against disease.

WHO works with countries across the globe to raise awareness of the value of vaccines and immunization and ensures that governments obtain the necessary guidance and technical support to implement high-quality immunization programmes. The ultimate goal of World Immunization Week is for more people – and their communities – to be protected from vaccine-preventable diseases.

This World Immunization Week 2022 campaign page will be updated regularly in the lead up to and during World Immunization Week.

European Immunization Week 2022

24–30 April 2022

For over 2 centuries, vaccines have helped make the world safer – from the very first vaccine developed to protect against smallpox to the newest mRNA vaccines used to prevent severe cases of COVID-19. Vaccines protect us as individuals and help us protect each other as members of the global community. The 2022 theme for European Immunization Week (EIW) is “Long Life for All”. It aims to reinforce the importance of equitable and expanded access to vaccines, to contribute to a long and healthy life for everyone.

This year EIW brings together partners and collaborators across the WHO European Region to focus on the importance of vaccines to protect people of all ages and backgrounds against vaccine-preventable diseases, and to remember the seismic historical impact of vaccines. Much has been achieved, and progress in controlling many diseases has accelerated in the past few decades, but 2022 is also a crossroads that presents many challenges.

The COVID-19 pandemic has led to increased politicization of vaccines and a decrease in childhood vaccination rates in several countries. Immunization services have been disrupted in Ukraine and all children who have fled the country will need access to routine childhood vaccines wherever they go. These challenges make the importance of universal access to vaccines clearer than ever. During EIW, WHO/Europe will work with its Member States and partners to create awareness about the benefits of vaccines and the risks of any decrease in vaccination rates.

EUROPEAN REGION

- The European Region has sustained its polio-free status since 2002.
- 29 of 53 countries in the Region have eliminated endemic spread of both measles and rubella.
- Diphtheria outbreaks have not been reported in the Region since the early 1990s.
- Over 600 million people in the European Region have been vaccinated against COVID-19, thereby saving an untold number of lives. A study by WHO/Europe and the European Centre for Disease Prevention and Control (ECDC) estimated that 470 000 lives were saved among those aged 60 years and over in the first 11 months of COVID-19 vaccination rollout in 33 countries across the WHO European Region.
- During the pandemic, childhood vaccination rates declined in several European countries. It is very important that children who have missed doses get back on schedule to prevent outbreaks of deadly diseases.
- Migrants and refugees must have access to needed vaccinations, to protect them from diseases that could be circulating wherever they are located.

Vaccinatieweek 2022

Vlaanderen
is zorg

laanderen
zorg

Oh wat een jaar

- ▶ Covid-19 vaccinatie – start december 2020
 - 28 december wordt het eerste covid-19 vaccin gegeven in een woonzorgcentrum in Vlaanderen
 - het personeel in WZC en ZH
 - 15 februari zijn de vaccinatiecentra klaar om te vaccineren
 - × Zorgverleners 1^{ste} lijn
 - × Bewoners van collectiviteiten
 - × Gewone bevolking van oud naar jong
 - Eindigen met de jongeren tot 12 jaar op het einde van de zomer van 2021

Ronde 2: najaar 2021

► Immuungecompromitteerden

- Basisschema 3 vaccins in plaats van 2 vaccins
- Boostervaccinatie voor bewoners woonzorg
- Boostervaccinatie voor personen met immuunstoornissen
- 2^{de} vaccinatie voor personen gevaccineerd met vaccin van Janssen
- Booster voor de volledige bevolking 18-plus

Ronde 3: voorjaar 2022

- ▶ Kindervaccinatie tegen covid-19 vanaf 5 jaar
- ▶ 2^{de} boostervaccinatie voor personen met immuunstoornissen
- ▶ Booster aangeboden aan 12-17 jaar
- ▶ 2^{de} booster aangeboden voor personen gevaccineerd met het vaccin van Janssen

Informatiecampagnes

- ▶ Radio
- ▶ TV
 - Regionaal
 - Nationaal
- ▶ Multimedia
 - × Facebook
 - × Twitter
 - × instagram

Informatiecampagne

- ▶ Affiches voor elke doelgroep en bij elke vaccinatie
- ▶ Folder
- ▶ Banners
- ▶ Webinars gegeven voor:
 - Zorgverleners
 - Breed publiek

Archief campagne COVID-19-vaccinatie - Laat je vaccineren

Vaccinatieweek 2022

- ▶ Nieuwe campagne breed publiek?
 - Covid-19 vaccinatie?
 - Reisvaccinatie?
 - Vaccinatie van moeilijk te bereiken groepen?
 - ...?

Vaccinatieweek 2022

- ▶ Terug naar de essentie
- ▶ Valentijnvaccinatiesymposium
 - Informeren van de vaccinatoren
 - Samen bezinnen over het afgelopen jaar en wat we allemaal gerealiseerd hebben op deze korte tijd
 - × 5.681.237 personen gevaccineerd tegen covid-19
 - × 15.904.665 covid-19 vaccins gegeven
 - Samenkomen en bijpraten over vaccinatie

Nieuwe uitdagingen

- ▶ Vaccinatie van de Oekraïense ontheemden
→ Webinar voor CLB's en Opgroeien
- ▶ Boosterprik voorjaar?
- ▶ Boosterprik najaar?
→ Motiveren

Wat brengt de vaccinatieweek 2023

- ▶ Een gewone vaccinatiecampagne breed publiek
- ▶ Gezondheidsconferentie vaccinaties
- ▶ Hopelijk geen nieuwe crisissen

Vlaanderen
is zorg

Dank je wel

- ▶ Inzet de afgelopen 2 jaar
 - ▶ Onuitputtelijke energie
 - ▶ Solidariteit
-
- ▶ Zonder jullie allen hadden we deze succesvolle Covid-19 vaccinatiecampagne niet kunnen realiseren!
