

What do Rubik's cubes and protein folding have in common?

Elias Thierens
(Antwerpen)

Friday, June 26, 2026
9:30-10:30h on campus **in M.G.015**
Analysis & Geometry Seminar, Antwerpen

In this seminar talk, we describe the Rubik's cube as a dynamical system and relate random moves on this configuration space to a Markov process. After this, we show that the random walk is ergodic and converges to a uniform distribution.
