

# Mapping Ocular Surface Enzymes in Healthy Subjects

**Autours:** Murat Akkurt Arslan, Françoise Brignole-Baudouin, Christophe Baudouin, Solenne Chardonnet, Cédric Pionneau, Frederic Blonde and Karima Kessal

## Introduction

### Enzymes are

- biocatalysts with the critical task of accelerating biochemical reactions in living cells and organisms <sup>1</sup>
- the largest class of proteins in tear film <sup>2</sup>
- involved in metabolism, cell division, gene expression, and immune system <sup>2</sup>

### Knowledge about ocular surface (OS) enzymes helps us to

- reveal involved biological processes and links with signaling pathways
- predict metabolism of ocular drugs <sup>3</sup>
- develop novel prodrug strategies and drug delivery systems <sup>3</sup>

**Aim:** To determine and classify the enzymes of tear fluid collected with capillary tubes and Schirmer strips based on nine comprehensive tear proteomics studies

## Methodology

### 1. Pooling proteins

#### 5 studies - Capillary tube

De Souza *et al.*, Genome Biol., 2006  
Hua *et al.*, BMC Ophthalmol., 2020  
Kandhavelu *et al.*, J. Proteomics, 2016  
Nättinen *et al.*, Trans. Vis. Sci. Tech., 2020  
Ponzini *et al.*, Int. J. Mol. Sci., 2021

#### 5 studies - Schirmer strip

Akkurt Arslan *et al.* Metabolites, 2021  
Aass *et al.*, Anal. Biochem., 2015  
Dor *et al.*, Exp. Eye Res., 2019  
Nättinen *et al.*, Trans. Vis. Sci. Tech., 2020  
Zhou *et al.*, J. Proteomics, 2012

### (a) Identification

#### Tear enzymes

ExplorEnz - The Enzyme Database  
Approved International Union of Biochemistry (IUBMB) Enzyme nomenclature

#### SEP\* enzymes

SEP\*, Schirmer strip-extracted proteome

### 2. Profiling and classification of enzymes

#### (b) Classification

**EC numbers**  
Enzyme Commission  
**main class**  
1. oxidoreductases  
2. transferases  
3. hydrolases  
4. lyases  
5. isomerases  
6. ligases  
7. translocases  
**subclass**  
often tells you often what type of compound or bond it acts on  
**sub-subclass**  
**serial number**  
"just" makes it so each enzyme has its own unique EC number

Classification of enzymes according to substrates and reaction they catalyze

#### (c) Functional annotation and enrichment analysis

Bioinformatics databases to reveal biological processes and signaling pathways and enriched terms

## Results

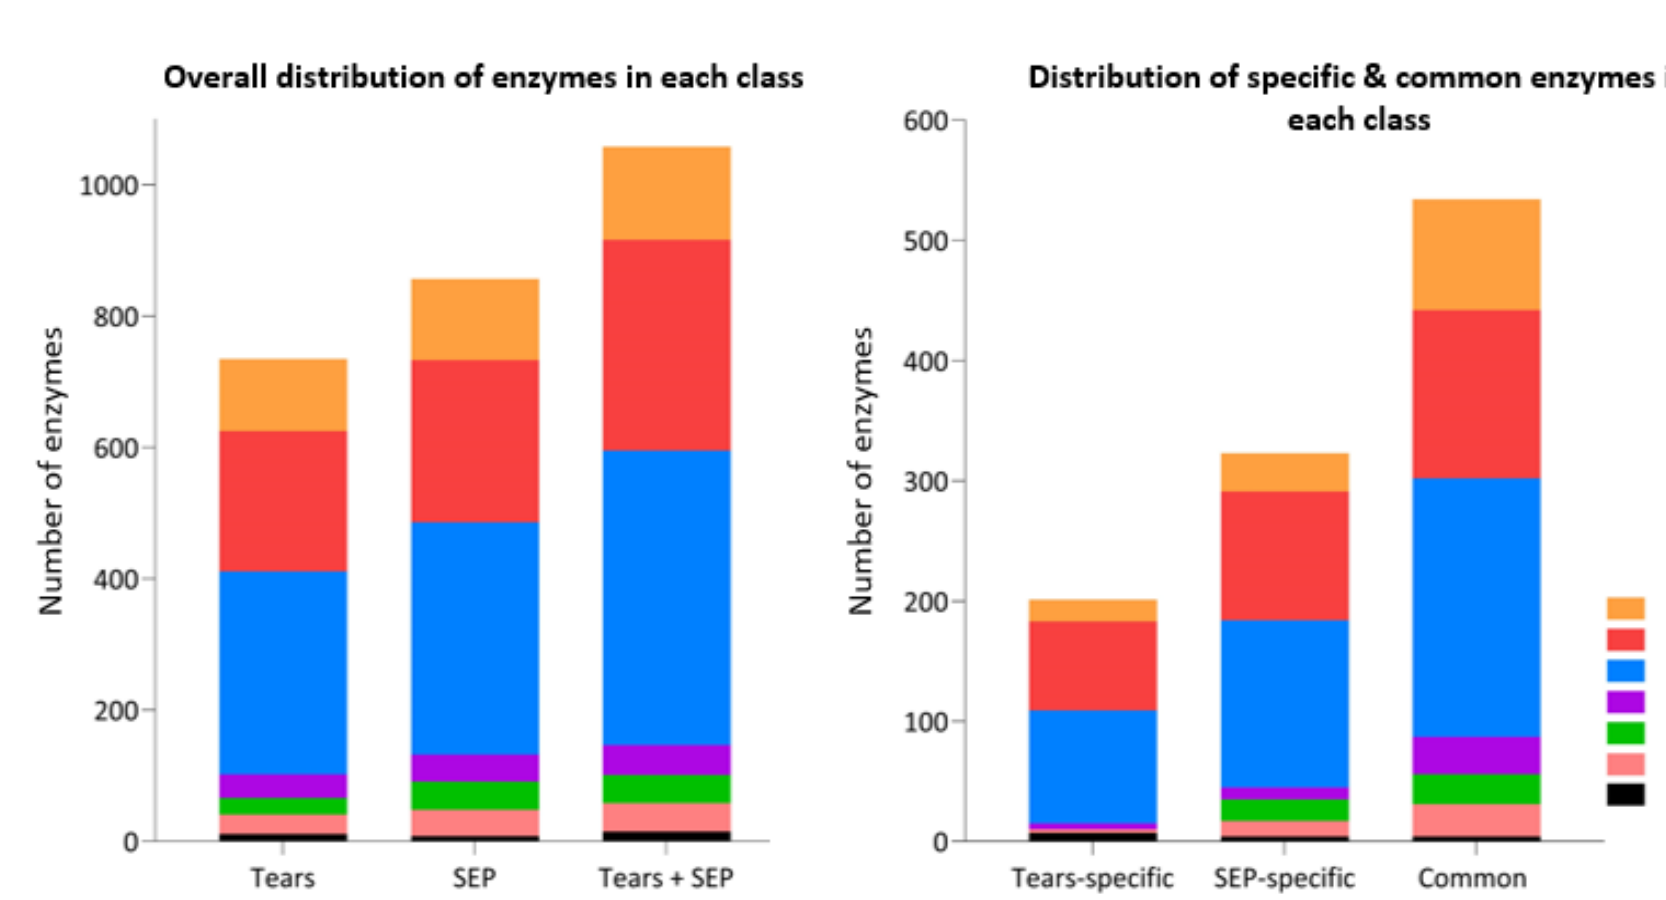

### Numbers of identified enzymes

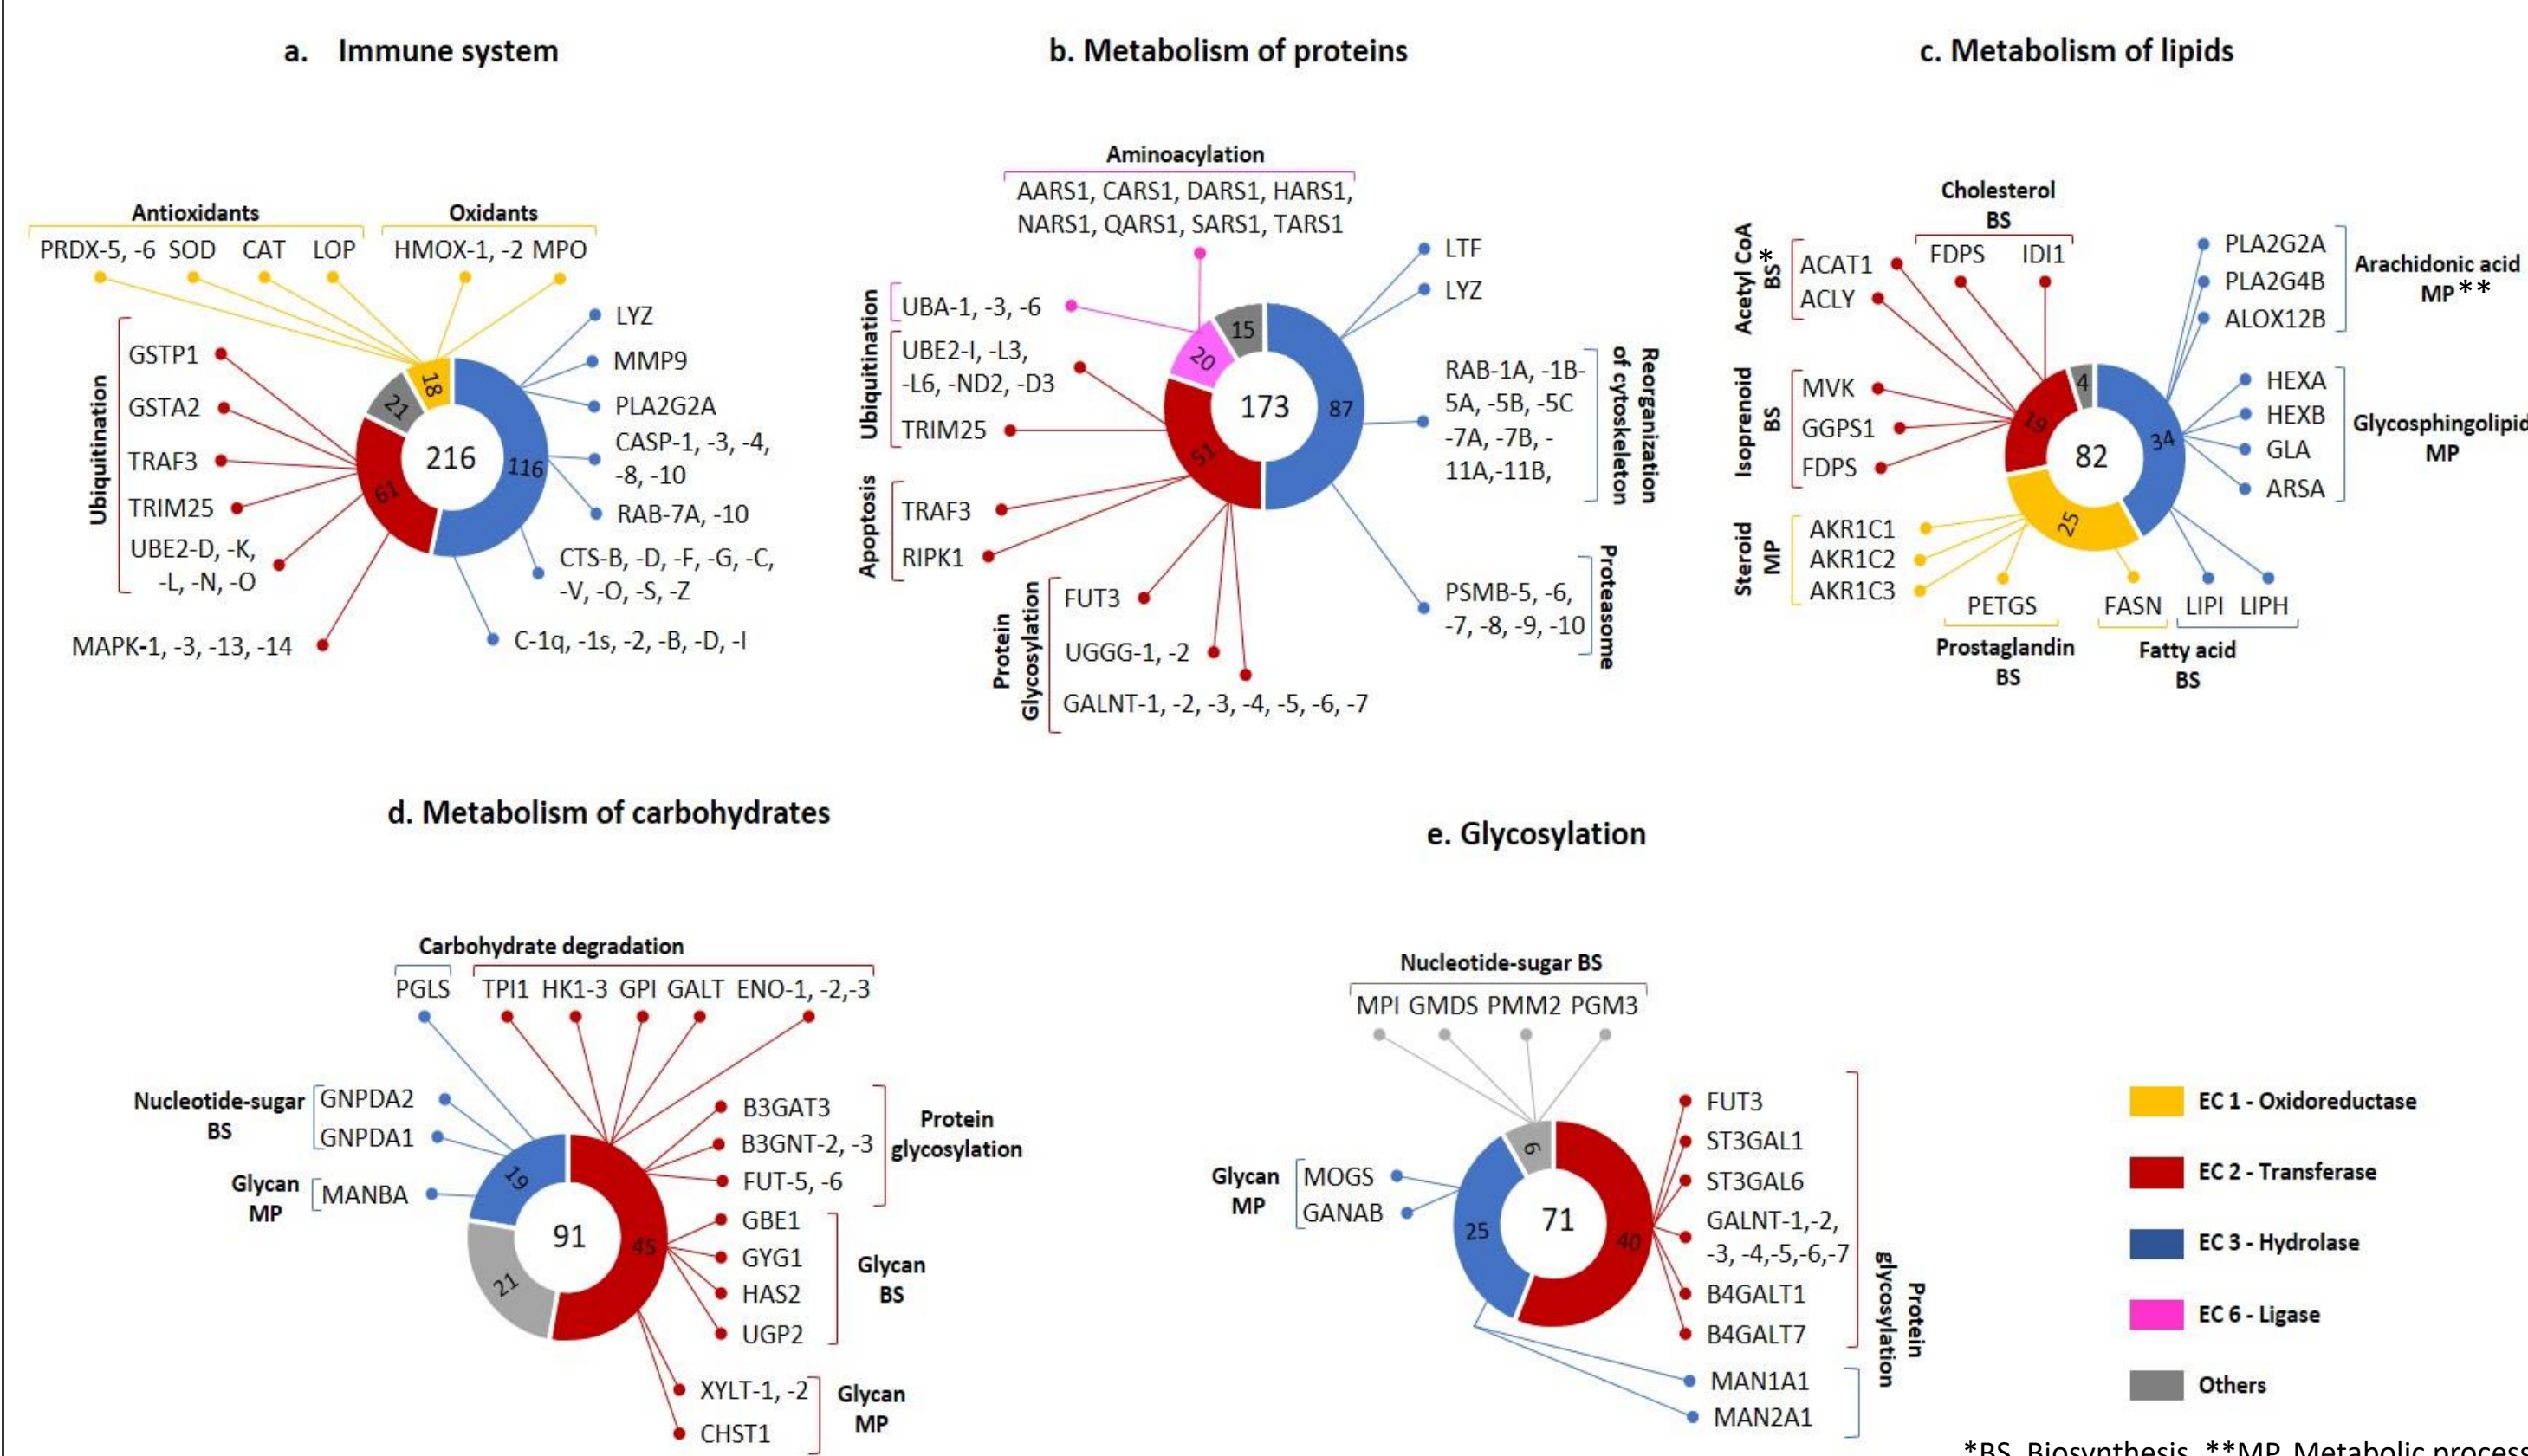

### Subclassification of all identified enzymes

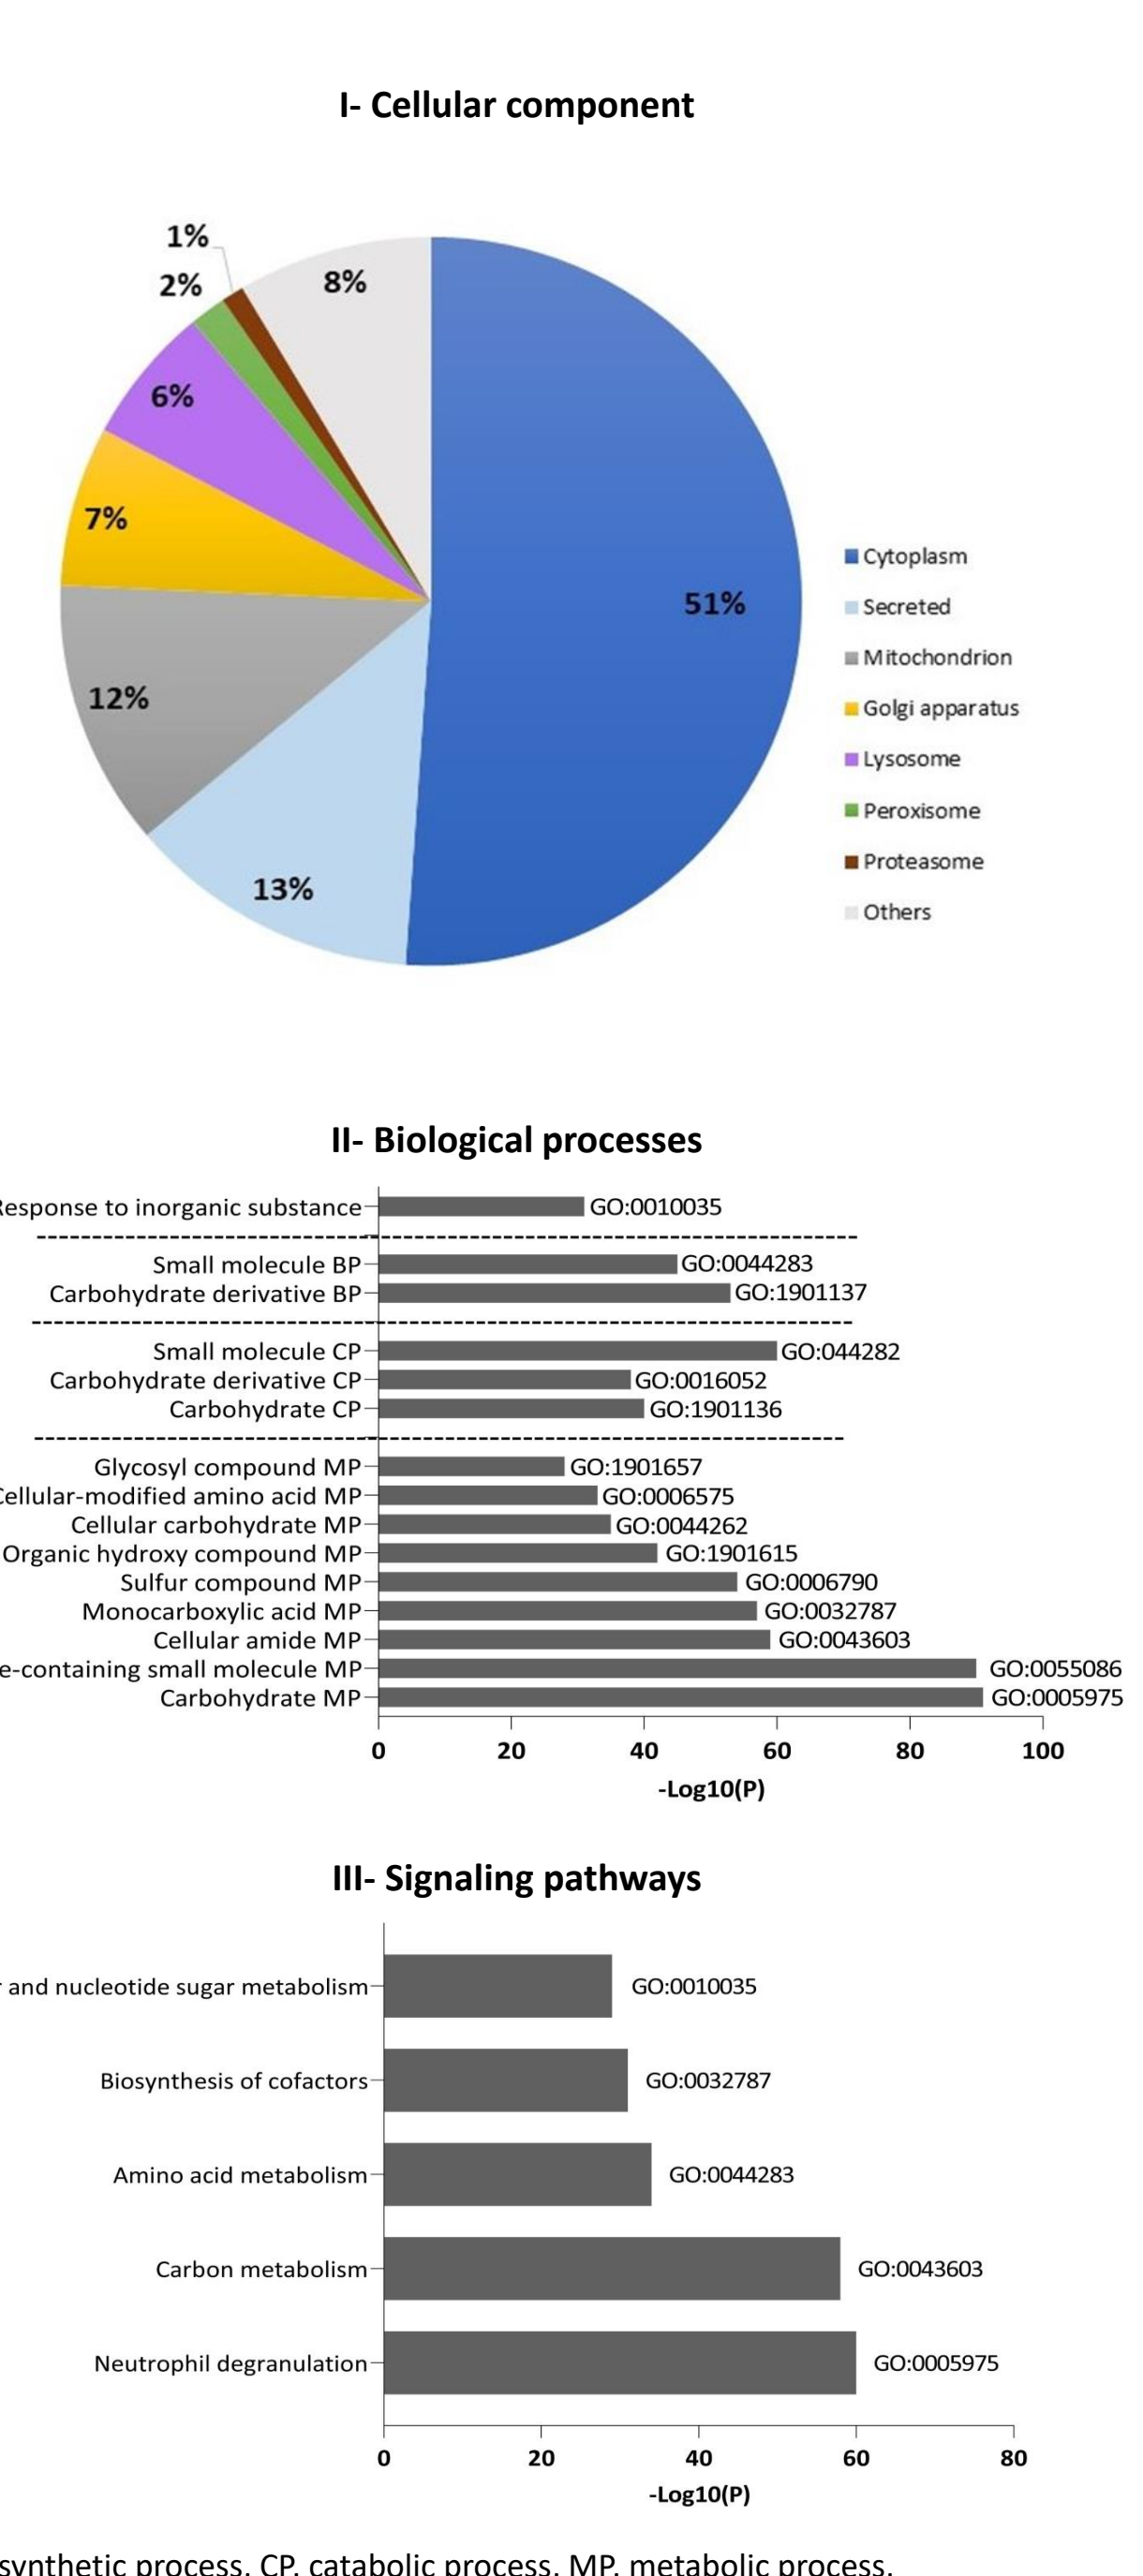

### Comparison of enzyme classes in tear and SEP

### Major signaling pathways

### Enrichment analysis

## Conclusions

- ✓ More enzymes, particularly isomerases, can be collected using Schirmer strips.
- ✓ Phosphotransferases, peptidases and esterases are the most represented enzyme subclasses on the OS.
- ✓ Compiled enzymes are mainly involved in immune system, metabolism and glycosylation pathways.
- ✓ This generated dataset can help develop novel ocular prodrug synthesis and drug delivery systems.
- ✓ Combining knowledge of OS enzymes with new approaches and techniques might open up new avenues for the development of novel drugs.
