Hyperbolic-regular fibers

Yannick Gullentops

(University of Antwerp)

November 25, 2020
16-17h via Microsoft Teams
Analysis & Geometry Seminar, Antwerpen

In this talk, we will discuss so-called *hypersemitoric systems* and the subtle differences with *semitoric systems* and the topology of hyperbolic-regular fibers. We will study the potential local topologies of such fibers and how we can use the group actions involved in the complete integrable system to extend the local topology to the whole fiber.
