

Packaging for refill

The Jar

The Jar is a refillable dry food dispenser that uses a large PET bottle for easy storage and dispensing with a push-lever mechanism. Once empty, the bottle is returned to the store, cleaned, and reused—reducing waste and promoting a circular system for sustainable packaging.

The Dose

The Dose is an innovative bottle cap mechanism that dispenses an exact amount with a simple twist. A half-turn fills the internal reservoir, and twisting it back releases the precise dose—ensuring accuracy, convenience, and mess-free dispensing.

The Portable

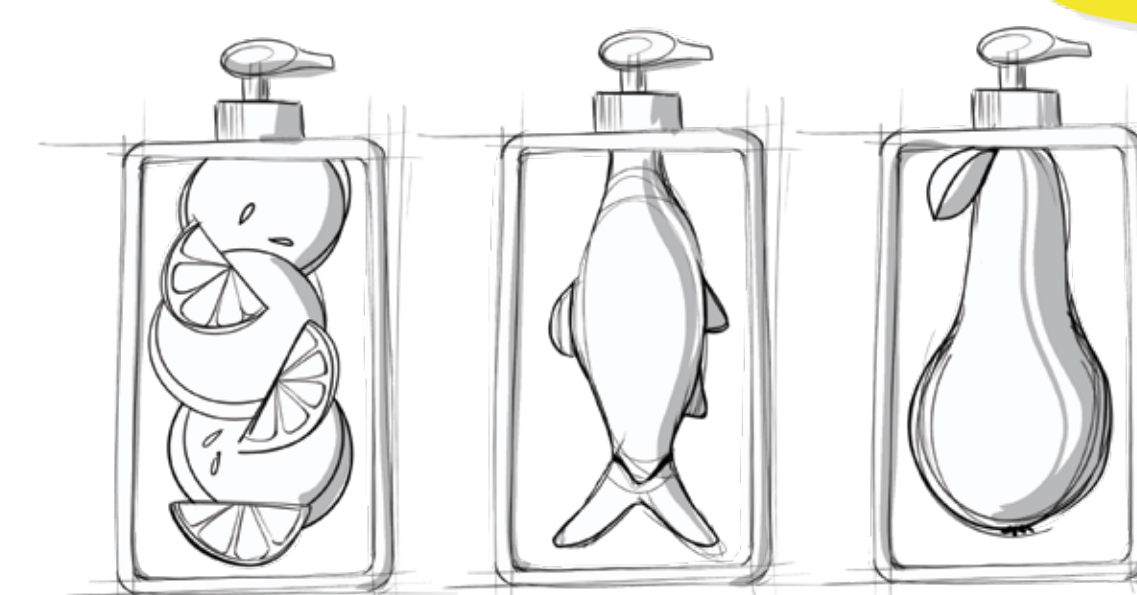

The Portable is a reusable drink container for on-the-go use. Insert your store-bought drink, twist on the top, and it locks in place while piercing the thin packaging. The new packaging saves resources and ensures a clean material flow for recycling. When empty, use it for water or compact it for easy storage.

The **Frame**

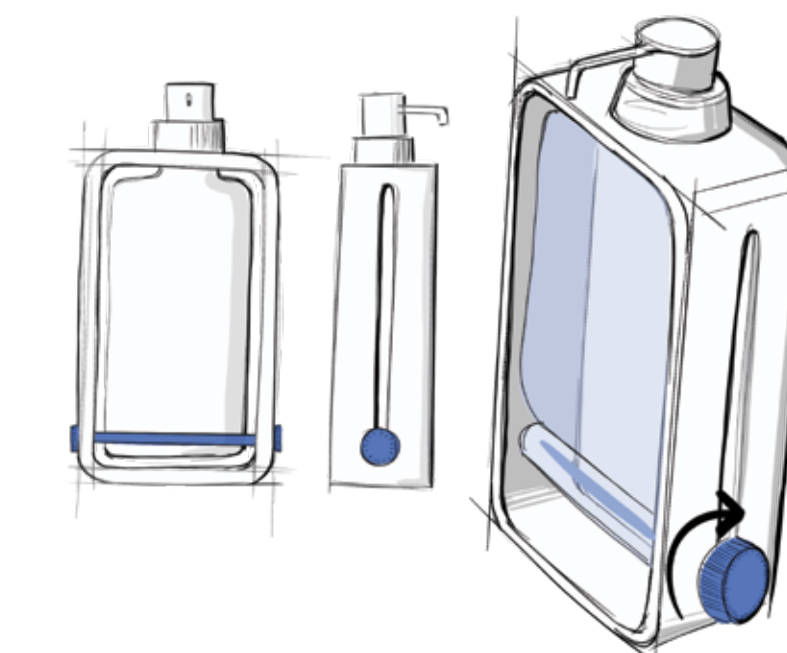

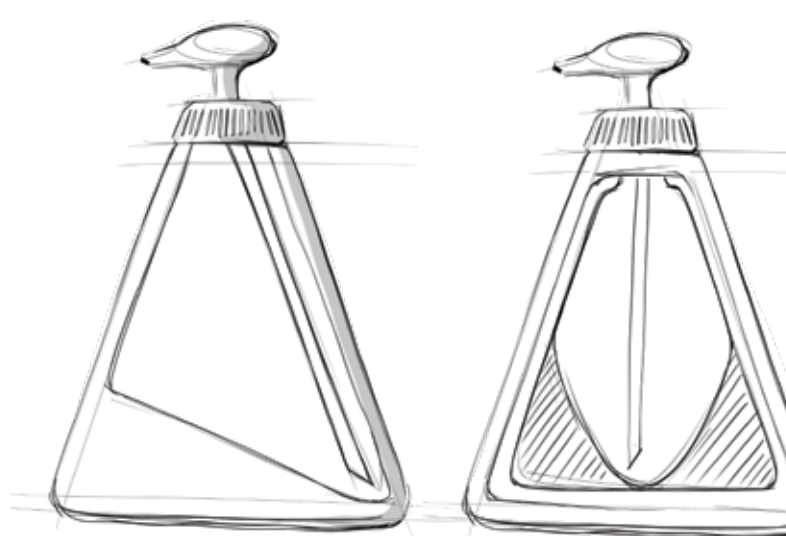

The Frame is a soap dispenser with a simple, open structure that holds a lightweight PET bottle.

Once inserted, the dispensing mechanism pierces the seal, allowing for effortless use. A cost-effective and sustainable way to reduce plastic waste.
