

## **Storytelling in research**

*Come and join this next quest of your academic career!*

---

### **Content**

Telling stories is a great way to communicate about your research. People's brains are naturally interested in stories. And you don't have to look far to find them, you can be the main character of your own research story.

While talking about the things you did gets the facts across, adding colour and emotions to the action brings your story to life and makes the facts more memorable. So yes, also describe how your lab is a bit messy and share how sad you felt when that experiment failed.

In this workshop, you will learn about finding, structuring and telling the stories of your own research. Through improvisation and writing exercises, we will explore different story structures, practice telling them, and bring them to the stage.

### **Target group**

Postdoctoral researchers of the University of Antwerp

### **Planning & location**

February 16 (09h-16h), Stadscampus, room to be confirmed

### **Trainer**

The workshop is led by dr. Ben Verhoeven who—after his PhD in Linguistics—became a science communicator and presentation coach.

### **How to subscribe?**

You can use [this link](#), upon approval of your supervisor (max. 12 participants).

We look forward to meeting you!
