<b>I</b>	<b>Free Fields</b>	<b>7</b>
<b>1</b>	<b>Fields of Hilbert spaces</b>	<b>9</b>
1.1	Quantum fields . . . . .	9
1.1.1	Fields . . . . .	9
1.1.2	Transposed fields . . . . .	10
1.2	Linear operators . . . . .	11
1.2.1	Diagonal operators . . . . .	11
1.2.2	Integral operators . . . . .	13
1.2.3	Adjoint operators . . . . .	13
1.2.4	Isometries . . . . .	15
1.3	Quantum expectations . . . . .	15
<b>2</b>	<b>Boson Fields</b>	<b>17</b>
2.1	The scalar boson field . . . . .	17
2.1.1	The irreducible components . . . . .	17
2.1.2	Coherent states . . . . .	19
2.1.3	Coherent fields . . . . .	20
2.1.4	The free field Hamiltonian . . . . .	22
2.1.5	The classical wave equation . . . . .	23
2.1.6	Correspondence principle . . . . .	24
2.1.7	Incoherent fields . . . . .	26
2.1.8	Correlations . . . . .	27
2.1.9	Lorentz covariance of coherent fields . . . . .	28
2.1.10	Lorentz covariance of non-coherent fields . . . . .	29
2.2	Electromagnetic fields . . . . .	30
2.2.1	The classical vector potential . . . . .	30
2.2.2	Field operators . . . . .	31
2.2.3	Coherent fields . . . . .	33
2.2.4	Single photon states . . . . .	34
2.2.5	SU(2) gauge symmetry . . . . .	34

<b>3 Fermionic Fields</b>	<b>39</b>
3.1 Scalar fermions . . . . .	39
3.1.1 The Klein-Gordon equation . . . . .	39
3.1.2 Larmor precession . . . . .	39
3.1.3 Fermionic state space . . . . .	40
3.1.4 Field operator . . . . .	41
3.2 The free Dirac equation . . . . .	42
3.2.1 The algebra of creation and annihilation operators . . .	42
3.2.2 The Hamiltonian . . . . .	43
3.2.3 Dirac's equation . . . . .	44
3.2.4 The adjoint equation . . . . .	47
3.2.5 Charge conjugation . . . . .	47
3.3 The Dirac current . . . . .	48
3.3.1 Two-point correlations . . . . .	48
3.3.2 Properties of the particle current . . . . .	49
3.3.3 The electric current . . . . .	51
3.3.4 Example of a polarized electron field . . . . .	53
3.4 Symmetries . . . . .	55
3.4.1 Representation independence . . . . .	55
3.4.2 Lorentz covariance of the Dirac equation . . . . .	56
3.4.3 Spatial rotations . . . . .	57
3.4.4 Lorentz boost . . . . .	59
<b>Appendices</b>	<b>59</b>
<b>A Polarization of electromagnetic waves</b>	<b>61</b>
<b>B Polarization of electron waves</b>	<b>63</b>
<b>C Transformation</b>	<b>67</b>
<b>D Useful relations</b>	<b>69</b>
<b>E Charge conjugation</b>	<b>71</b>
<b>F The current operators</b>	<b>73</b>
<b>G The continuity equation</b>	<b>77</b>

<i>CONTENTS</i>	5
<b>II Interacting fields</b>	<b>79</b>
<b>4 Interaction of Photons and Electrons</b>	<b>81</b>
4.1 The interaction Hamiltonian . . . . .	81
4.1.1 Strategy . . . . .	81
4.1.2 The state space . . . . .	82
4.1.3 The interaction Hamiltonian . . . . .	82
4.1.4 Gauge transformations . . . . .	83
4.2 Bound states . . . . .	84
4.2.1 The unperturbed vacuum . . . . .	84
4.2.2 Trial wave function . . . . .	85
4.2.3 Variational approach . . . . .	88
4.2.4 Long-wavelength analysis . . . . .	90
4.3 Emergent Coulomb forces . . . . .	91
<b>Appendices</b>	<b>92</b>
<b>H Long wavelength analysis</b>	<b>93</b>
