

Hermes project: implementing EGFR mutation analysis in clinical care in Antwerp

E. De Droogh, A. Janssens & A. Lefebure

1st line EGFR-TKI vs chemotherapy in EGFR mutation positive NSCLC

Inclusion criteria:

- Chemonaive pts with good PS
- EGFR mutation positive

R

EGFR-TKI
until PD

Platinum-based chemotherapy
up to 4 or 6 cycles

1st endpoint: PFS

EGFR-TKI as 1st-line treatment for NSCLC with activating EGFR mutations?

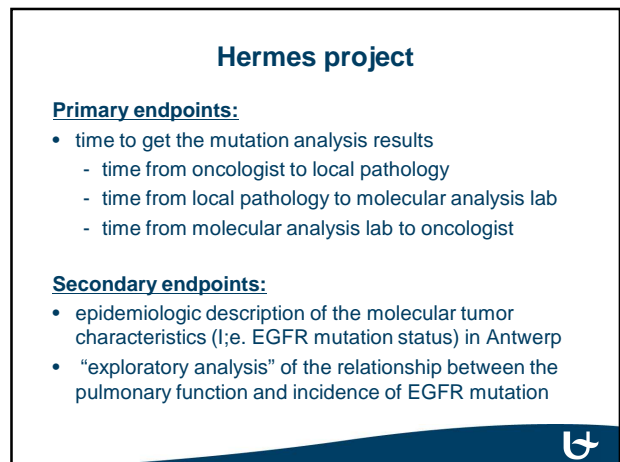

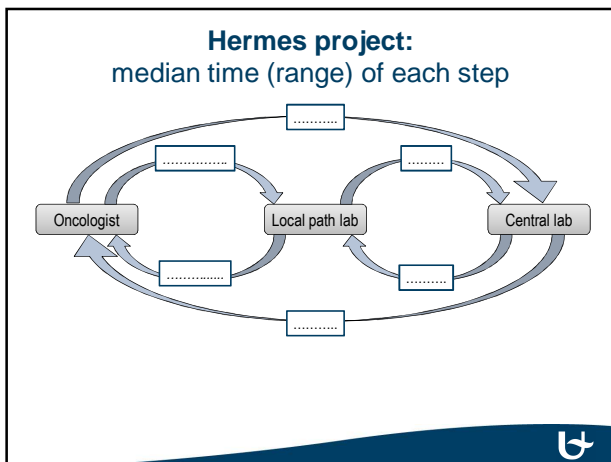

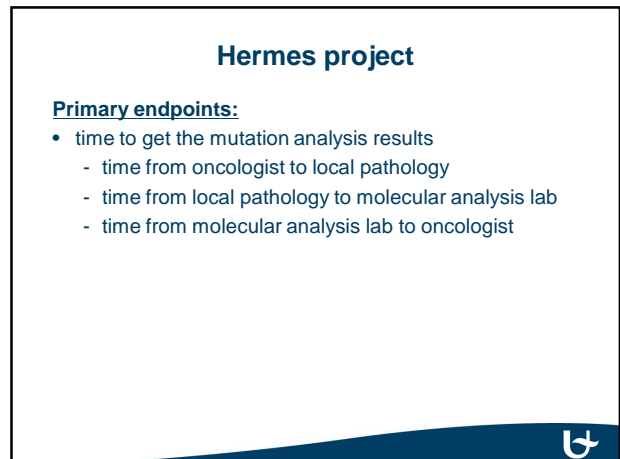

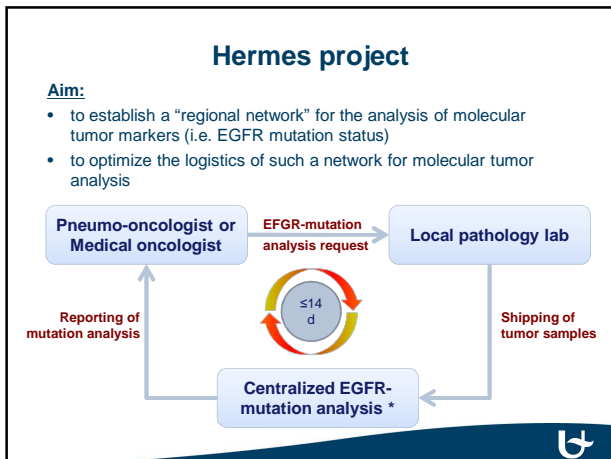

Pro	Contra
Improved progression free survival	Logistics of EGFR mutation analysis
Improved response rate	No improved overall survival
Improved QoL and symptom control	
Favourable toxicity profile	
Following 1 st line chemotherapy ±1/3 of pts receive no further treatment	

→ gefitinib is the new standard of care for the 1st-line treatment for NSCLC with activating EGFR mutations!

Hermes project

Aims:

- to establish a "regional network" for the analysis of molecular tumor markers (i.e. EGFR mutation status)
- to optimize the logistics of such a network for molecular tumor analysis:
 - Ideally the results should be available in all patients within 2 weeks of the analysis request.
- to obtain an epidemiologic description of the molecular tumor characteristics (i.e. EGFR mutation status) in Antwerp

BESLUIT

- Snelle implementatie van EGFR mutatie testing met gemiddeld na 14 dagen resultaat.
- EGFR mutatie testen bij alle non-squamous onafhankelijk van het geslacht en rokerstatus.
