NSD - Norwegian Centre for Research Data

NSD is situated in the city center of Bergen. NSD is one of the largest archives for research data of its kind and provides data to researchers and students in Norway and abroad. Additionally, NSD is a resource centre, which assists researchers with regard to data gathering, data analysis, and issues of methodology, privacy and research ethics. The main objective is to improve possibilities and working conditions for empirical research that is primarily dependent on the access to data. To fulfil this objective NSD works to reduce financial, technical, legal and administrative barriers between users and data resources.

Within the fields NSD operates, three factors have been of crucial importance in making favourable conditions for accessing data:

- The Research Council of Norway has provided the resources required

New EU General Data Protection Regulation (GDPR)

With the implementation of the GDPR the Nordic countries now face an unprecedented possibility to create a common legal framework.

See the Position paper of the Nordic countries

NSD News - 1/2017

New data
Local government organisations in Norway are now required to provide data to researchers. This is a significant step towards open data and transparency. The law also states that data should be made available to researchers on request, provided that the data is not subject to any legal restrictions. This is a positive development for research, as it will allow researchers to access a wider range of data than before.

SHARING RESEARCH DATA IN THE NORDIC COUNTRIES
New data protection rules in the EU open doors to Nordic research. The new rules will allow researchers to share data across borders, which is a significant step towards open data and transparency. This will allow researchers to access a wider range of data than before, and will also make it easier to share data between researchers in different countries.

NSD News - 2/2016

New data
Local government organisations in Norway are now required to provide data to researchers. This is a significant step towards open data and transparency. The law also states that data should be made available to researchers on request, provided that the data is not subject to any legal restrictions. This is a positive development for research, as it will allow researchers to access a wider range of data than before.

INTERVIEW SURVEYS: EUROPEAN SOCIAL SURVEY (ESS) OG INTERNATIONAL SOCIAL SURVEY PROGRAMME (ISSP)
People from 36 countries have been helping researchers to understand Europe for 15 years. The ESS and ISSP are two of the largest and most comprehensive survey programmes in the world. They provide researchers with a wealth of data on a wide range of topics, including social, economic, and health issues. This data is used to inform policy and research, and has been instrumental in understanding the challenges and opportunities facing Europe today.

NSD – developing infrastructures for science and research in Norway and in Europe

The screenshot shows the NSD website interface. The header includes the NSD logo and the text "NORSK SENTER FOR FORSKNINGSDATA". Navigation links include "Om NSD", "Kontakt", and "English". A secondary navigation bar lists "Personverntjenester", "Arkivere data", "Finne data", "DBH", "Opplæring", and "Programvare".

The main content area features four service tiles:

- Personverntjenester**: NSD vurderer forsknings- og studentprosjekter som behandler personopplysninger.
- Arkivere data**: NSD gir råd om innsamling av data, og tilbyr sikker lagring av forskningsdata. [Datahåndteringsplan](#)
- Finne data**: NSD har mange omfattende datasamlinger. Her finner du en oversikt.
- DBH**: NSDs utdanningsstatistikk (DBH) omfatter institusjoner innen høyere utdanning og fagskoler.

Below these tiles, there are three main sections:

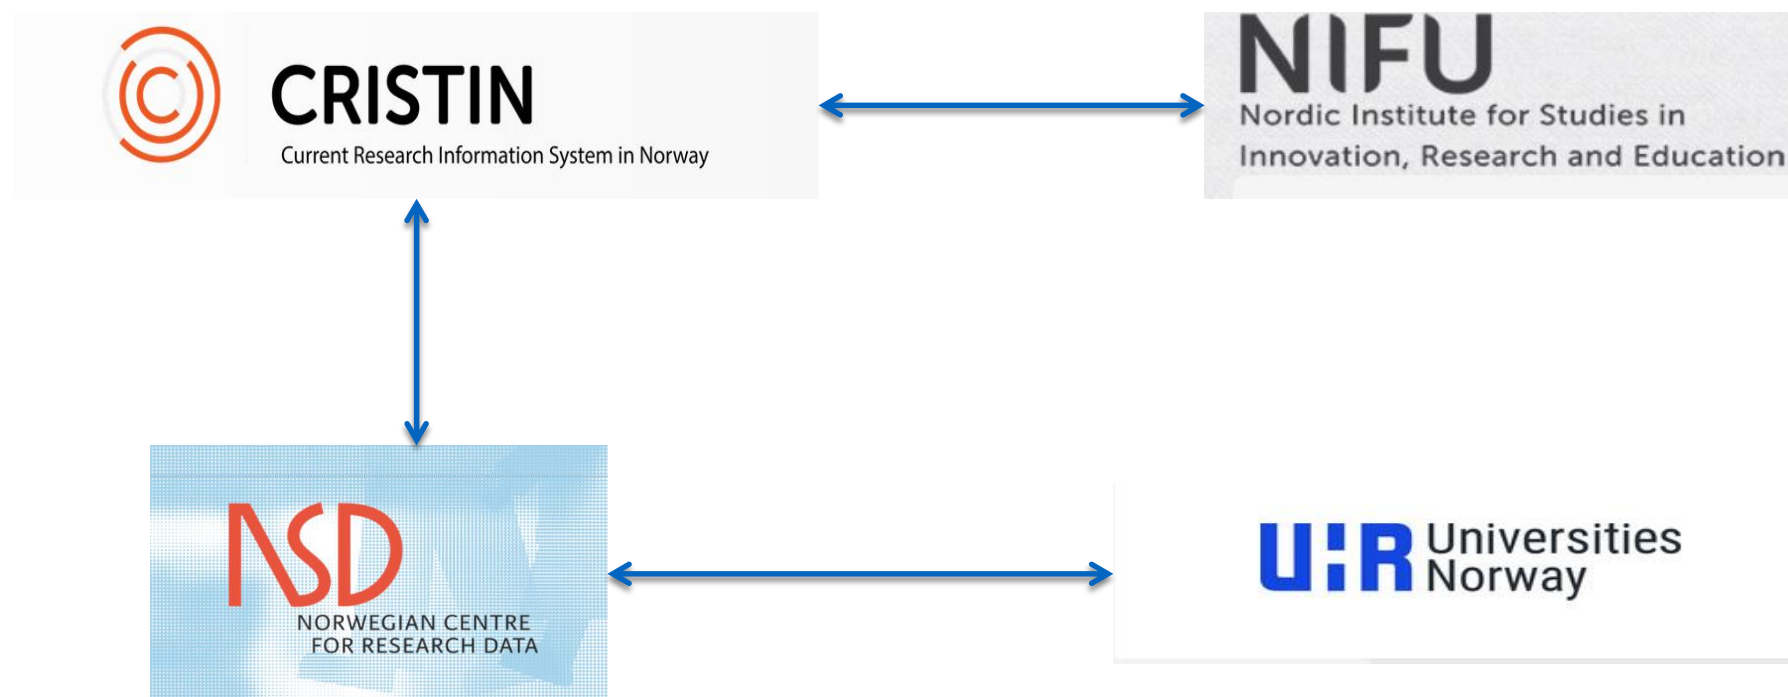

- TEMA: GDPR**: "Nye personvern løsninger fra NSD hjelper forskningen med å etterleve personvernforordningen". It discusses the implementation of GDPR in Norwegian law and offers new services to help researchers and institutions comply. [Les mer >>](#)
- AKTUELT**: "Vigdis Kvalheim blir ny direktør". Accompanied by a photo of Vigdis Kvalheim, it announces her appointment as the new administrative director of NSD. [Les mer >>](#)
- NSD NORDi**: "Prosjektet NSD NORDi skal gjøre det enklere å arkivere, finne og dele forskningsdata." [LES MER](#)

On the right side, there is a "NYHETS BREV" (Newsletter) sign-up form with a text input field "Oppgi epost" and a blue "Abonnér" button.

The Windows taskbar at the bottom shows the time as 09:46 on 24.08.2018.

The Norwegian Register for Scientific Journals, Series and Publishers is operated jointly between The National Board of Scholarly Publishing (NPU) and NSD - Norwegian Centre for Research Data on behalf of the norwegian Ministry of Education and Research. NSD has operational responsibility. NPU has approval authority of journals, series and publishers. The register shows which scientific publications are recognized in the weighted funding model.

Use this page to search for authorised publication channels. If you cannot find specific journals, series or publishers, you may [suggest additions](#). The deadline for submissions of new publication channels for approval for the current year is **30th November**. See [criteria for inclusion](#).

The Nordic List

Published: 2018-05-16

Since 2015 the Nordic countries have been collaborating to develop a common registry of authorized research publication channels with bibliographic data on journals, series and publishers. Denmark, Finland and Norway have joined their national lists of authorized research publication channels, used for indicators in the national performance-based research funding systems. Sweden, Iceland, Greenland and Faroe Islands do not have a similar funding system but are planning to use such lists as a tool for a national or Nordic overview of authorized research publication channels.

My comments:

☐ 14/11/2014 10:10:21, Norge via [Forslag 20771]

Transactions of the American Mathematical Society er allerede registrert på nivå 2. Dette er ein underserie av dette tidsskriftet for dei som ynskjer at artiklane skal vere Open Access. Det spesielle i dette tilfellet er at artiklane i "begge tidsskrifta" går gjennom same redaksjonelle prosess og fagfelleevaluering. Om artikkelen vert akseptert kan forfattar velje om artikkelen skal publiserast i abonnemntstidsskriftet eller gjerast Open Access. Om sistnemnte vert valt, vert artikkelen flytta til underserien (Series B). På bakgrunn av dette burde underserien vere på same nivå som hovudtidsskriftet. Meir informasjon om prosessen kan finnast her: <http://www.ams.org/publications/journals/open-access/open-access> -- Tormod Strømme

ERIH PLUS criteria

Published 2018-02-01

Only scientific periodicals/journals may be included in ERIH PLUS. Books, monographic series and conference proceedings are currently not included in ERIH PLUS. Please note that according to the ERIH PLUS [approval procedures](#), a journal's authorship is evaluated by reviewing the issues published during the last two years (see points 5 and 6 below). Therefore, in order to be approved in ERIH PLUS, a journal must have a publication history of at least two years. This is a minimum criterion.

Journals must meet the following minimum requirements:

1. ERIH PLUS requires an explicit description of the journal's procedures for external/independent peer review. As a minimum, the journal's website must describe how the process ensures that reviewers are independent of the authors, i.e. not affiliated with the same institution.

Latest news

Open Access journals

2018-07-02: ERIH PLUS are marking the journals with DOAJ as a standard for Open Access.
Fact: 1200+ journals in ERIH PLUS are also in DOAJ.

NSD NORWEGIAN CENTRE FOR RESEARCH DATA

NO 09:47 24.08.2018

ERIH PLUS: European Reference Index for the Humanities and Social Sciences

Launched 2014 by NSD

Developed as a quality list, not for financing research, but to give a overview of the scientific journals in Humanities and Social Sciences for European research.

2015: Formally transferred to NSD from The European Science Foundation (ESF) European Reference Index for the Humanities (ERIH) and added the Social sciences (ERIH PLUS)

Built in the same way as the Norwegian list

It has adapted quality assessment and criterias from the Norwegian list

In stead of panels, it was transforming to be based on criterias

Revision of ERIH channels in 2015/2016/2017 after new criterias

Includes an Advisory Board

2018: 7000 approved journals and 12 300 journals in total

Suggestions and documentations are contributions from the scientists/associated coworkers/national experts

Sharing database with the Norwegian list

-and based on almost similar criterias

The Nordic List

The Nordic ListSearchListStatisticsAboutContactSigned in as kristin.gasemyr@nsd.no

Information

The Nordic List consists of a common bibliographic dataset on the publication channels listed in each of the three countries national databases. The lists are joined technically in a cloud solution which will give all the countries common duties to contribute to the list and equal rights to use it.

The objectives of the Nordic collaboration on publication channels are:

- to reduce and share the burden of maintaining bibliographic data concerning publication channels,
- to improve and refine the data quality contained in each national database and provide for greater comparability,
- to facilitate and improve analysis of research output at the national level and comparatively between Nordic countries.

Data sources

The Nordic List is a common dataset based on national lists of authorized research publication channels from Denmark, Finland and Norway.

The list will also contain information on open access channels via imports of data from DOAJ (Directory of Open Access Journals).

Other sources:

- ISSN
- Scopus

Participants

Denmark

- FI - Styrelsen for Forskning og Innovation
- Uddannelses- og Forskningsministeriet

Finland

- TSV - Tieteellisten Seurain Valtuuskunta
- OKM - Opetus- ja kulttuuriministeriö
- CSC - Tieteen tietotekniikan keskus

Norway

- NSD - Norsk senter for forskningsdata
- UHR - Universitets- og Høgskolerådet

Nordic list

Built in 2017

Includes about 30 000 channels from Norway, 20 500 from Denmark and 27 300 from Finland

The main goal was for administrators in the Nordic countries to share knowledge and to rationalize work with information

Status for this list: loading the last information in to the system

- The difficult work: matching series and publishers**
- Future work: to build further for research: output, Api**

The European Science Foundation (ESF) signed in January 2014 a memorandum of understanding with the NSD - Norwegian Centre for Research Data to transfer the maintenance and operations of the European Reference Index for the Humanities (ERIH) to NSD. The ERIH database operated by NSD is called ERIH PLUS.

ERIH PLUS criteria

Published 2018-02-01

Only scientific periodicals/journals may be included in ERIH PLUS. Books, monographic series and conference proceedings are currently not included in ERIH PLUS. Please note that according to the ERIH PLUS [approval procedures](#), a journal's authorship is evaluated by reviewing the issues published during the last two years (see points 5 and 6 below). Therefore, in order to be approved in ERIH PLUS, a journal must have a publication history of at least two years. This is a minimum criterion.

Journals must meet the following minimum requirements:

1. ERIH PLUS requires an explicit description of the journal's procedures for external/independent peer review. As a minimum, the journal's website must describe how the process ensures that reviewers are independent of the authors, i.e. not affiliated with the same institution.

Latest news

Open Access journals

2018-07-02: ERIH PLUS are marking the journals with DOAJ as a standard for Open Access.

Fact: 1200+ journals in ERIH PLUS are also in DOAJ.

ERIH criteria

In order to be included a journal must fulfil normal international academic standards of quality, i.e. it must have a quality control policy that governs the selection of articles. In principle, this should be achieved through **peer review**, but it is also accepted that some high-quality journals have **other systems of ensuring quality control**.

All journals must also fulfil basic publishing standards: **ISSN, timeliness of publication, active operations of an editorial board, complete bibliographic information for all cited references, and full address information for every author.**

Criteria for inclusion of new journals

Valid from 2014 or 2015 until 2018-01-31

To be included in ERIH PLUS, journals must meet the following minimum requirements:

Explicit procedures for **external peer review**

Academic editorial board, with members affiliated with universities or other independent research organizations

Valid ISSN code, confirmed by the [international ISSN register](#)

All original articles should be accompanied **by abstracts** in English and/or another **international language** relevant for the field

Information on **author affiliations and addresses**

No more than two thirds of the authors published in the journal are from the same institution

ERIH PLUS criteria

Published 2018-02-01

Only scientific periodicals/journals may be included in ERIH PLUS. Books, monographic series and conference proceedings are currently not included in ERIH PLUS. Please note that according to the ERIH PLUS [approval procedures](#), a journal's authorship is evaluated by reviewing the issues published during the last two years (see points 5 and 6 below). Therefore, in order to be approved in ERIH PLUS, a journal must have a **publication history of at least two years**. This is a minimum criterion. Journals must meet the following minimum requirements:

ERIH PLUS requires **an explicit description of the journal's procedures for external/independent peer review**. As a minimum, the journal's website must describe how the process ensures that reviewers are independent of the authors, i.e. not affiliated with the same institution.

ERIH PLUS requires that the **members of the academic editorial board are listed**, along with their affiliations with universities or other independent research institutions.

ERIH PLUS requires a **valid ISSN code**, confirmed by the [International ISSN Portal](#). Be advised that journals with ISSN codes listed as “assigned to a publication but not yet confirmed” or “free ISSN” will not be processed.

ERIH PLUS requires that all original articles are accompanied by **abstracts in English and/or another international language relevant for the field**. As the ERIH PLUS team needs access to the abstracts in order to evaluate the journal, they should be available online. It is not sufficient that the journal’s author/submission guidelines refer to abstracts. ERIH PLUS requires information on **author affiliations** for all scholarly articles for the last two years of publication, i.e. the full names of the respective universities or other independent research institutions. ERIH PLUS encourages journals also to include author addresses (either email or postal addresses).

ERIH PLUS requires that no more than two thirds of the authors published in the journal are from the same institution. The authorship of journals is determined by reviewing the last two years of published issues.

As ERIH PLUS encourages transparency the requested information should thus be available on the journal’s website. However, if any of the information has limited availability, e.g. subscribers only, please notify us, either through a comment in the submission form or by email at erihplus@nsd.no.

We welcome the submission of all journals within the humanities and social sciences. However scientific publication channels even if published outside Europe but used by European scholars will be prioritized.

Before submitting a new journal to ERIH PLUS, please read the ERIH PLUS [approval procedures](#).

Criteria for inclusion of new scientific publication channels

To be included in the Norwegian Register for Scientific Journals, Series and Publishers, publication channels must meet the following minimum requirements:

Established procedures for external peer review. The concept of external peer review refers to various forms of editorial procedures that differ between academic fields and publication channels, and which indicate that the manuscript has been evaluated by one or more independent experts on the subject matter

An academic editorial board (or an equivalent) primarily consisting of researchers from universities, research institutes etc.

International or national authorship

Authorship of a publication channel is defined in accordance with the following operational criteria:

Authorship is international when less than two-thirds of the authors published in the publication channel are from the same country

Authorship is national when more than two-thirds of the authors published in the publication channel are from the same country

Authorship is local when more than two-thirds of the authors published in the publication channel are from the same institution
Scientific publication channels with local authorship will not be included in the Norwegian Register for Scientific Journals, Series and Publishers. National authorship is required as a minimum if external peer review is to function properly in a scientific publication channel. It is questionable whether external peer review can function satisfactorily for publication channels that primarily represent an institution's own researchers. NSD determines the authorship of publication channels by reviewing the issues published during the two last years. Only original publications will be considered. Translated works that have already been published will not be considered.

See also [approval procedures](#).

Same criterias, but demand for more specified information for the databases

Growing activity and more information

Search for information to confirm quality

Ex.

Beals list as a source of information

Nordic list: contract with DOAJ in 2017 to mark Open Access, but also to add information

DOAJ – included journals but also the reasons for excluded journals

SCOPUS – adds information on new and included channels

Alternatives: Web-search for information which is time consuming

Use of different lists will demand specification after the purpose for the “receiving” list

Rationalization of work and practices will develop, some examples:

Proposer/scientist bring information to the lists:

makes a responsibility in the research community

- reduces workload in the registries
- can guarantee quality as scientific advisor who knows the field
- it shifts the responsibility from the list to the proposer/scientist
- adds communication and open information

ERIH PLUS: started using National contacts for quality assessment because of a bigger territory of users.

Now the Norwegian list: would like to use Member of «fagfelt»/scientific field for information like national experts in ERIH PLUS

ERIH PLUS now marks journals with DOAJ after Nordic list and Norwegian list did the same

The lists can use each other to add standards for quality in the lists to fulfill the scientific criterias.
