

Managing data quality in Cristin and the Norwegian Publication Indicator (NPI)

Marit Henningsen and Espen Sandøe Karlsen,
Unit – The Norwegian Directorate for ICT and Joint Services in Higher Education and Research

Cristin

Contents of Cristin database today

137 member
institutions
(2017)

Success factors for high data quality

- **One NPI workflow in one system**
- **Collaboration with stakeholders**
- **Unique identifiers**
- **Coverage**
- **Reusable data**

Data quality I - workflow

Scholarly publications (NPI): high quality database due to

- Well established inclusion criteria (subset categories)
- Common reporting requirements (updated annually)
- Backed by (small) incentives
- Transparent system
- Workflow on the same record

Approval workflow (quality assurance)

Checklists for super-users

- Publications channels without level - nominate
- Duplicates – check and merge
- Missing metadata – submit missing information
- Status NVI-reporting – follow up those who are slow

To report or not to report?

- Research leader/publication boards

Disagreements between institutions

Data quality II – unique identifiers

Unique identifiers

- Publication channels (NSD)
- Researchers
 - Norwegian ID
 - Eventually ORCID
- Institutions
 - Member institutions: maintained and updated with faculties and institutes in Cristin
 - Link to registry of collaborating institutions
- Challenging to maintain

Data quality III - Collaboration with stakeholders

Involvement and collaboration

- Member institutions
- Universities Norway (NPI)
- NSD (Publication channels)
- RCN Norway
- NIFU

Coverage

A «complete» scholarly bibliography for Norway?

- Good representation of SSH
- Good representation of publically funded institutions **involved in performance based funding**, including hospitals and research institutes
- Plan to include other institutions

Other results (not NPI)

- Variable quality and completeness
 - Local incentives?
 - Visible?
 - Reuseable?

Reusable data improves quality

- **API**
- **Standard reports and monitoring**
 - OA-monitor
- **Custom data/statistics/reports for research**
- **Data source for evaluations**

Subject-specific evaluations (RCN Norway)

Cristin available as a tool for the panels

- Research groups overview
 - Researchers (CV)
 - Institutions
 - Projects
 - Publications
- Humanities research (2017)
 - 97 research groups evaluated
- Social Science research (2018)
 - 135 research groups evaluated

Cristin as a data source for bibliometric analyses

- NPI-publications
